

Data Privacy and Protection

The Reality

Privacy and security legislation requires organizations to protect their data against the threat of data theft. Data breaches create harmful publicity and expose personally identifiable information (PII) causing damage to corporate reputation and client confidence. For these reasons organizations must comply with internal policies and auditing requirements pertaining to privacy and security.

Data privacy issues can arise in response to information from a wide range of sources, such as:

- Healthcare records
- Criminal justice investigations and proceedings
- Financial institutions and transactions
- Biological traits, such as genetic material
- Residence and geographic records
- Ethnicity

The Solution

Plato Consulting Inc. (Plato) is a leader in information and technology security. Our sister company, Camouflage Software Inc., provides a software product, Camouflage®, to ensure your organization is safe and secure. This data masking solution will add value to any project, providing assurance that you're sensitive and PII is protected.

Camouflage is an enterprise-wide data masking software designed to mask copies of your production databases. By creating realistic and fully functional

de-identified data, we guarantee your data security needs are met minimizing the risk of any potential threat in your organization.

By ensuring that sensitive data is only available to those who need it, Camouflage® software provides the critical security that clients, employees, and consultants need to maintain confidence in the organization.
